
Original crossings, cups, one cut, auxiliary traces
Full Hermite–Newton algebra: values *and* first normal directions
Positive complete source and strict angle problem
Primitive lattice, actual pyramids/prisms, ordered face and cusp maps
Exact core/alias decomposition and rational certificates
Whole-tree tangent cancellation and a nonzero complex color packet
Full Fourier–Hermite filling period
Endpoint currents, all charges, primitive filling equation
The actual knot complement after all auxiliary fillings
$N^{-1}\log|\langle K\rangle_N| \longrightarrow \mathrm{Vol}(S^3 \setminus K)/(2\pi)$
