External colors: the part proved and the part still needed

Untwisted varied ports

The whole original source equals its geometric core up to an exponentially small relative error.

Signed varied ports

Shared-radius certificates give a joint corridor. A one-port local test is shown on this axis.

Near the opposite endpoint, the complete term has an alias. The original small-color term cancels it; both must be retained.

Schematic slice of normalized integer deficits; the corridor is not drawn to scale.
Fix the diagram and its filling slopes first, then let the quantum level N grow.
