

A joint complex domain

$\left|\mathrm{Re}\, x_1 - \frac{1}{2}\right| + \left|\mathrm{Re}\, x_2 - \frac{1}{2}\right| < \frac{1}{2}$

Pair degree and magnetic coordinate may both be complex. The channel remains an integer.

A limit of this common-frame route

For the certified right-angled cut, no single frame puts every factor here on its selected sheet. Continuation or coherent resummation, and a global estimate, remain necessary.

This is the projection onto real parts. Imaginary parts are unrestricted; the uniform asymptotic holds on compact subsets. Dashed boundaries are excluded.
